

	LESSON PLAN	Date: 15/12/2016
	Sub.Name: CLOUD COMPUTING Branch: CSE, Semester& Sections: VIII & Asec	To 19/04/2017

T138 – CLOUD COMPUTING

Lecture :3 Periods/week Internal Marks : 25

Tutorial :1 External Marks : 75

Credits :4 External Examination : 3 Hrs

UNIT – I

Foundations: Introduction to cloud computing, migrating into a cloud enriching, integrating as a service paradigm for the cloud era, cloud computing for enterprise applications

UNIT – II

Infrastructure as a Service (IaaS): Virtual Machines Provisioning and Migration Services, On the management of Virtual machines for cloud Infrastructures, Enhancing Cloud Computing Environments using a Cluster as a service, Secure Distributed Data Storage in Cloud Computing

UNIT – III

Platform and Software as a Service(Aphasias): Aneka-Integration of Private and Public Clouds, Comet Cloud: An Autonomic Cloud Engine-systems Cloud-Based Solution for Business Applications, Workflow Engine for Clouds, Understanding Scientific Applications for Cloud Environments, The map Reduce Programming Model and Implementations

UNIT – IV

Monitoring and Management: An architecture for Federated Cloud Computing, SLA management in Cloud Computing: A service Provider's Perspective, Performance Prediction for HPC on Clouds

UNIT – V

Applications: Architecting Applications for the Amazon Cloud, Massively Multiplayer Online game Hosting on cloud Resources, Building Content Delivery Networks Using Clouds, Resource Cloud mashups.

TEXT BOOK

“Cloud Computing: principles and Paradigms”, Raj Kumar Bunya, James Bromberg, Andrej Kosciusko, Wiley, New York, USA

Pre requisite: Basic knowledge regarding computer, graphics and screen designs

Course Educational Objectives:

- Demonstrate an understanding of guidelines, principles, and theories influencing cloud computing.
- Recognize how a cloud computing operation to be performed.
- Use the information sources available, and be aware of the methodologies and technologies supporting advances in cloud computing.

Course Outcomes: After completion of this course a student can able to

CO1: Define cloud computing and related concepts.

CO2: Understand the key dimensions of the challenges of Cloud Computing

CO3: Understand the assessment of the economics, financial, and technological implications for selecting cloud computing for an organization.

CO4: Describe the benefits of cloud computing and Understand the challenges of cloud computing.

CO5: able to understand how cloud components fit together.

T214 – HUMAN COMPUTER INTERFACE

Lecture	: 3 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 3	External Examinations	: 3 Hrs

UNIT - I

Introduction: Importance of user Interface – definition, importance of good design, benefits of good design. A brief history of Screen design.

The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user – Interface popularity, characteristics- Principles of user interface.

UNIT – II

Design process – Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, understanding business junctions.

UNIT - III

Screen Designing : Design goals – Screen planning and purpose, organizing screen elements, ordering of screen data and content – screen navigation and flow – Visually pleasing composition – amount of information – focus and emphasis – presentation information simply and meaningfully – information retrieval on web – statistical graphics – Technological consideration in interface design.

UNIT - IV

Windows – New and Navigation schemes selection of window, selection of devices based and screen based controls.

UNIT - V

Components – text and messages, Icons and images – Multimedia, colors – uses, problems with choosing colors.

Interaction Devices – Keyboard and function keys – pointing devices – speech recognition digitization and generation – image and video displays – drivers.

TEXT BOOK

The essential guide to user interface design, Wilbert O Galitz, Wiley DreamaTech.

REFERENCES

1. Designing the user interface. 3rd Edition Ben Shneidermann, Pearson Education Asia.
2. Human – Computer Interaction. ALAN DIX, JANET FINCAY, GRE GORYD, ABOWD, RUSSELL BEALG, PEARSON.

Pre requisite: Basic knowledge regarding computer, graphics and screen designs

Course Educational Objectives:

- Demonstrate an understanding of guidelines, principles, and theories influencing human computer interaction.
- Recognize how a computer system may be modified to include human diversity.
- Select an effective style for a specific application.
- Design mock ups and carry out user and expert evaluation of interfaces.
- Carry out the steps of experimental design, usability and experimental testing, and evaluation of human computer interaction systems.
- Use the information sources available, and be aware of the methodologies and technologies supporting advances in HCI.

Course Outcomes: After completion of this course a student can able to

CO1: Understand the importance of the Graphical user interface and popularity of the graphics.

CO2: Understand the importance of human characteristics in design and how people interact with computers.

CO3: Students can articulate and apply common design principles for making good decisions in the design of user interfaces.

CO4: Understand various kinds of windows and their characteristics and have an ability to select the proper device based and screen based controls.

CO5: Understand different components that are available in the screens and various interaction devices which are used to interact with the computer.

---	---	---

T214 – HUMAN COMPUTER INTERFACE

Lecture	: 3 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 3	External Examinations	: 3 Hrs

UNIT - I

Introduction: Importance of user Interface – definition, importance of good design, benefits of good design. A brief history of Screen design.

The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user – Interface popularity, characteristics- Principles of user interface.

UNIT – II

Design process – Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, understanding business junctions.

UNIT - III

Screen Designing : Design goals – Screen planning and purpose, organizing screen elements, ordering of screen data and content – screen navigation and flow – Visually pleasing composition – amount of information – focus and emphasis – presentation information simply and meaningfully – information retrieval on web – statistical graphics – Technological consideration in interface design.

UNIT - IV

Windows – New and Navigation schemes selection of window, selection of devices based and screen based controls.

UNIT - V

Components – text and messages, Icons and images – Multimedia, colors – uses, problems with choosing colors.

Interaction Devices – Keyboard and function keys – pointing devices – speech recognition digitization and generation – image and video displays – drivers.

TEXT BOOK

The essential guide to user interface design, Wilbert O Galitz, Wiley DreamaTech.

REFERENCES

3. Designing the user interface. 3rd Edition Ben Shneidermann, Pearson Education Asia.
4. Human – Computer Interaction. ALAN DIX, JANET FINCAY, GRE GORYD, ABOWD, RUSSELL BEALG, PEARSON.

Pre requisite: Basic knowledge regarding computer, graphics and screen designs

Course Educational Objectives:

- Demonstrate an understanding of guidelines, principles, and theories influencing human computer interaction.
- Recognize how a computer system may be modified to include human diversity.
- Select an effective style for a specific application.
- Design mock ups and carry out user and expert evaluation of interfaces.
- Carry out the steps of experimental design, usability and experimental testing, and evaluation of human computer interaction systems.
- Use the information sources available, and be aware of the methodologies and technologies supporting advances in HCI.

Course Outcomes: After completion of this course a student can able to

CO1: Understand the importance of the Graphical user interface and popularity of the graphics.

CO2: Understand the importance of human characteristics in design and how people interact with computers.

CO3: Students can articulate and apply common design principles for making good decisions in the design of user interfaces.

CO4: Understand various kinds of windows and their characteristics and have an ability to select the proper device based and screen based controls.

CO5: Understand different components that are available in the screens and various interaction devices which are used to interact with the computer.

	<p style="text-align: center;">LESSON PLAN T221- INDUSTRIAL MANAGEMENT</p>	<p>Date: 15/07/2016</p>
Branch: CSE	Semester & Sections: I	To 26/11/2016

T221 – INDUSTRIAL MANAGEMENT

Lecture : 4 Periods/week

Internal Marks: 25

Tutorial : 1

External Marks: 75

Credits : 4

External

Examination: 3 Hrs

UNIT – I; *Introduction to management;*

Definition, Nature, importance, Functions of Management- Taylor's Scientific Management, Fayol's Principles of Management, Elton Mayo theory, Maslow, Herzberg, Douglas Mc Gregor, Basic concepts of Organization- Authority, Responsibility, Delegation of Authority, Span of control, Departmentalization, Decentralization, and organization structures.

UNIT – II; *Operations Management:*

Plant Location, Factors influencing location, Principles and Types of Plant layout- methods of production, work study, Basic Procedure involved in method study and work measurement.

UNIT – III; *Quality and Material Management:*

Statistical Quality Control- Meaning, variables and attributes- X chart, R chart, C chart, P chart and problems, Acceptance sampling, sampling plans, Deming's contribution to quality, Materials Management: Objectives, Need for inventory control, Purchase procedure, store records, EOQ, ABC analysis, stock levels.

UNIT – IV: *Human Resource Management*

HRM; concepts, basic concepts of HR manager, Manpower planning, Recruitment, Selection, Training and Development, Placement, Wage and Salary Administration, Promotion, Transfer, Separation, Performance Appraisal, Job evaluation and Merit Rating.

UNIT – V *Project Management:*

Early techniques in project Management- Network Analysis, PERT, CPM, identifying critical path, Probability of completing the project with given time. Project cost analysis, project crashing and problems.

TEXT BOOK

Management Science, TMH, Dr. Aryasri, 4th edition, 2009

REFERENCES

1. Kooniz and Waihrich- Essentials of Management, TMH, 8th edition, 2010
2. O.P.Khana, Industrial Engineering and Management.

Prerequisite: Industrial management, Management concepts and programs

Course Educational Objectives:

1. To make students understand management, its principles, contribution to management, organization, and its basic issues and types
2. To make students the concept of plant location and its factors and plant layout and types, method of production and work study importance
3. To make students understand quality control uses and material management techniques
4. To make understand the concept of HRM and its functions
5. To make students understand PERT & CPM methods in effective project management and need of project crashing and its consequence on cost of project

COURSE OUTCOMES: After the completion of the course, students should be able to

CO1: Apply management principles to the particle situations to be in a position to know which type of business organization structure suits

CO2: Able to make decision making relating to the problems in operations and production activities there by improving the productivity by proper utilization input factors by designing the better working methods and with better work study techniques.

CO3: Able to improve quality of working through SQC techniques and also in a position to reduce the investment in materials through better control of inventory

CO4: Able to manage people in working environment with the practices of HRM across corporate businesses.

CO5: Able to use PERT & CPM techniques in effective project management to identify critical path and try to complete projects on time as well as reducing the project durations if need arises.

	LESSON PLAN T221- INDUSTRIAL MANAGEMENT	Date: 15/07/2016 To 26/11/2016
Branch: CSE	Semester & Sections: I	

T221 – INDUSTRIAL MANAGEMENT

Lecture : 4 Periods/week	Internal Marks: 25
Tutorial : 1	External Marks: 75
Credits : 4	External

Examination: 3 Hrs

UNIT – I; *Introduction to management;*

Definition, Nature, importance, Functions of Management- Taylor’s Scientific Management, Fayol’s Principles of Management, Elton Mayo theory, Maslow, Herzberg, Douglas Mc Gregor, Basic concepts of Organization- Authority, Responsibility, Delegation of Authority, Span of control, Departmentalization, Decentralization, and organization structures.

UNIT – II; *Operations Management:*

Plant Location, Factors influencing location, Principles and Types of Plant layout- methods of production, work study, Basic Procedure involved in method study and work measurement.

UNIT – III; *Quality and Material Management:*

Statistical Quality Control- Meaning, variables and attributes- X chart, R chart, C chart, P chart and problems, Acceptance sampling, sampling plans, Deming’s contribution to quality, Materials Management: Objectives, Need for inventory control, Purchase procedure, store records, EOQ, ABC analysis, stock levels.

UNIT – IV: *Human Resource Management*

HRM; concepts, basic concepts of HR manager, Manpower planning, Recruitment, Selection, Training and Development, Placement. Wage and Salary Administration, Promotion, Transfer, Separation, Performance Appraisal, Job evaluation and Merit Rating.

UNIT – V *Project Management:*

Early techniques in project Management- Network Analysis, PERT, CPM, identifying critical path, Probability of completing the project with given time. Project cost analysis, project crashing and problems.

TEXT BOOK

Management Science, TMH, Dr. Aryasri, 4th edition, 2009

REFERENCES

3. Kooniz and Waihrich- Essentials of Management, TMH, 8th edition, 2010
4. O.P.Khana, Industrial Engineering and Management.

Prerequisite: Industrial management, Management concepts and programs

Course Educational Objectives:

6. To make students understand management, its principles, contribution to management, organization, and its basic issues and types
7. To make students the concept of plant location and its factors and plant layout and types, method of production and work study importance
8. To make students understand quality control uses and material management techniques
9. To make understand the concept of HRM and its functions
10. To make students understand PERT & CPM methods in effective project management and need of project crashing and its consequence on cost of project

COURSE OUTCOMES: After the completion of the course, students should be able to

CO1: Apply management principles to the particle situations to be in a position to know which type of business organization structure suits

CO2: Able to make decision making relating to the problems in operations and production activities there by improving the productivity by proper utilization input factors by designing the better working methods and with better work study techniques.

CO3: Able to improve quality of working through SQC techniques and also in a position to reduce the investment in materials through better control of inventory

CO4: Able to manage people in working environment with the practices of HRM across corporate businesses.

CO5: Able to use PERT & CPM techniques in effective project management to identify critical path and try to complete projects on time as well as reducing the project durations if need arises.

	Department of CSE	
	Outcome based lesson plan	
	Academic year: 2015-16	Course: Industrial Management
	Programme: B.Tech	Unit No: 1 to 5
	Year & Sem: VIII	Section: A

S.No	Teaching Learning Process (TLP)	Delivery Methods (DM)	Assessment Methods (AM)
1	Solving Real world problem	Chalk & Talk	Assignments
2	Explaining application before theory	ICT tools	Quiz
3	Solving problems	Group discussions	Tutorials
4	Designing of experiments	Industrial visit	Surprise Tests
5	Problems on environmental, economics, health & safety	Field work	Mid Exams
6	Problems on professional & ethics	Case studies	Model Exam
7	Seminar	Mini Projects	QAs
8	Problems using Software	Numerical treatment	
9	Self study	Design / Exercises
